

**Keep Your Turf
In Shape** with the

Certified Rhino™ Synthetic Turf Maintenance Program

Before ProGrass STM

After ProGrass STM

Protecting Your Investment

You've made a substantial investment in your field. But usage, weather, exposure, natural aging and microbial contamination can cause damage to your field. The maintenance personnel charged with keeping your synthetic playing surface in tiptop shape have done their best with the equipment they have available to them. However, once a year, your surface should be professionally renewed.

Protect it with an annual RHINO maintenance by the ProGrass Turf Team to improve overall the performance, appearance and longevity of your field.

Specialized grooming removes unwanted contaminations and restores playability.

All equipment used in the ProGrass Rhino STM Program is ProGrass approved and operated by a ProGrass Maintenance Technician.

Each certified maintenance is performed under the direct supervision of a ProGrass Senior Field Maintenance Technician to ensure the desired results and customer satisfaction. Suggested maintenance procedures include seven important steps:

- 1 Inspection** of the field to assess the condition of turf and infill and identify any problem areas.
- 2 Deep Grooming** of the entire field, using ProGrass approved equipment, to perform extensive fiber brushing. This process is designed to uncover buried fibers and restore a uniform infill depth over the entire playing surface.
- 3 De-compacting** of the infill to help assure safe playability and to improve G-MAX performance.

4 Magnetic Metal Collecting to remove foreign objects (ferrous materials) that can cause unsafe conditions.

5 Professional Cleaning and removal of all unwanted materials and debris from the field area.

6 Disinfectant Application of approved antimicrobial disinfectant to comply with your warranty.

7 Review Maintenance Procedures to be performed by owners personnel and make recommendations.

www.prograssturf.com

ProGrass has emerged as one of the preeminent names in the synthetic turf industry with installations can be located from Connecticut to California.

Teams choose us because:

- ProGrass has been under the same majority ownership from day one.
- All of the ProGrass offices are located right here in the United States.
- All ProGrass installers are ProGrass certified employees.
- ProGrass specializes in design-build projects.
- ProGrass is a Certified Member of the Synthetic Turf Council in good standing.
- ProGrass has a 50 million dollar bonding capability.
- ProGrass is a Storm Water Management Specialist.

The ProGrass product has been received as "One of the Best Products on the Market" by customers who have spent years evaluating this industry. The reason is simple: we know the industry and have developed the team, the products and processes that exceed the expectations of our demanding and knowledgeable customers.

“I couldn’t be more happy with my ProGrass athletic field and now that they’re doing the maintenance, it’s clear why their fields last so long and play so well. They really care about the details.”

— *Scott Heinauer, Director of Athletics and Head Football coach at Mars High School*
